

JDAI.Solutions, for the colleague who was not on the call.

JDAI.Solutions is an AI consulting firm in Poland and the United States that designs, builds and runs AI agents, automation, custom software, websites and mobile apps.

FOUNDED IN 2025 • POLAND AND THE UNITED STATES •
CONTACT@JDAI.SOLUTIONS • UPDATED SEPTEMBER 2026

01 What we do

Web & search. Sites that load fast, rank, and get cited by AI answers.

AI agents. Receptionists, voice agents and chatbots that answer, qualify and book.

Automation & integrations. Every call, form and email lands in the CRM the same way, every time.

Custom software. Dashboards, CRMs and AI systems built to how your business actually runs.

Mobile apps. Loyalty and custom apps that keep your customers coming back.

The named services are examples. Every engagement starts with an audit of the whole operation, and we build only what can be justified on return.

02 How an engagement runs

Stage	Duration	What happens	What you keep
01 Audit	3–5 days	We trace the whole operation, from first enquiry to finished job, and measure where it leaks. Numbers, not opinions.	A written audit you own, whether or not you continue.
02 Pilot	1 week	The smallest system that proves the fix, on real traffic. One phone line, one form, one workflow.	Evidence before you commit to the full build.
03 Build	1–2 weeks	The full system, built in your own accounts and repositories. Reviewed weekly, demoed as it grows.	Code and accounts you own outright.

Stage	Duration	What happens	What you keep
04 Launch	2–3 days	Cutover with a rollback plan. We watch the first days of real use next to you.	A launch that nobody notices, except the leads.
05 Managed scale	Ongoing	We run it, tune it, and extend it as the business changes. Monthly numbers, no surprises.	A system that keeps improving instead of decaying.

Three things, in writing. A go / no-go at every stage, so you never commit to a full build before you have seen evidence on your own traffic. Fixed scope and a fixed quote before the build starts. And if a pilot does not move the number we agreed on, you keep the audit, the pilot and the code, and you owe nothing further.

03 Ownership

- Every system is built inside cloud accounts, repositories and vendor accounts that you own. We are added as collaborators and removed on request.
- Secrets live in your environment configuration, never in code, never in chat.
- Handover documentation lists every account, key and integration.

The code, the accounts and the data are yours from day one.

04 Data handling

- Personal data moves: caller → voice platform → your database → your CRM → alert to you. It does not pass through JDAI-owned infrastructure.
- Model providers are used for inference only; we opt out of training-data retention wherever the provider offers it.
- Row-level security is on by default. Public policies: none. Service keys stay server-side.
- Agents identify themselves as AI. Recording consent is announced where required (two-party consent states, EU).
- Recordings and transcripts are stored in your accounts with a retention period you set. Default: 90 days.
- Callers can ask for a human at any point; the agent hands off with a transcript.

05 Sub-processors

Provider	Purpose	Region
Vercel	Hosting and edge network for websites and dashboards	US / EU (per project)
Supabase	Database and authentication	US or EU region (per project)
Retell	Voice agent platform, telephony orchestration	US
Twilio	Phone numbers, SMS, call routing	US / EU
ElevenLabs	Text-to-speech and voice agents	US / EU
OpenAI	Language models (inference only, no training on your data)	US
Anthropic	Language models (inference only, no training on your data)	US
Telegram	Owner alerts (lead notifications)	EU / NL
Resend	Transactional email	US / EU
Google Workspace	Email and documents for engagement communication	EU

Not every engagement uses every row; the statement of work lists the ones that apply. At least 14 days' notice before any addition.

06 Agreements

- We sign a Data Processing Agreement on request (GDPR Article 28 terms for EU clients).
- NDAs before any audit that touches production data.
- If your procurement or IT team has a security questionnaire, we answer it in writing and can supply architecture diagrams.

07 Published result

E-Z Auto Spa 239, Naples, Florida: an AI receptionist that answers the calls the owner misses. 8 qualified leads in month one.

Case study: jdai.solutions/work/ez-auto-spa

Most of our work is under NDA and is not published.

08 Who you work with

Jeremi Jarosz

Dominik Macioszek

There is no delivery team behind us and no account layer in front of us.
